

**Workshop Lectures
The Clay Minerals Society
Volume 9
Table of Contents**

Volume 9, 1999, Synchrotron X-ray Methods in Clay Science

Darrell G. Schulze, Joseph W. Stucki, & Paul M Bertsch, Editors

Overview of Synchrotron X-ray Sources and
Synchrotron X-rays.....D. Schulze and P. Bertsch

- Introduction
- Synchrotron X-ray Sources and Synchrotron Light
- General Description of a Synchrotron
 - First, Second, and Third Generation Synchrotron X-ray Sources
- Properties of Synchrotron Radiation
 - X-ray Generation
 - Energy versus Wavelength
 - Definitions of X-ray Intensity
 - Energy Distribution of Bending Magnets
 - Energy Distribution of Insertion Devices
 - Polarization and Time Structure
- Hard versus Soft X-ray Synchrotrons
- Summary
- References

Fundamental Aspects and Applications of X-ray Absorption
Spectroscopy in Clay and Soil Science.....S. Fendorf

Introduction

XAFS Applications in Clay and Soil Science
Basic Consequences of X-ray Absorption
XAFS Data Acquisition and Analysis
Experimental Considerations
 Conventional Experimental Designs
 Obtaining Surface Sensitivity
 Electronic, Symmetry, and Chemical Environment
 Determination:
 XANES Spectroscopy
Structural Analysis: EXAFS Spectroscopy
 Analysis Steps
 Data Analysis Programs
Sources of Further Information
References

Application of Polarized EXAFS to Fine-Grained Layered
Minerals. A. Manceau, M. Schlegel, D. Chateigner, B. Lanson,
C. Bartoli, W. Gates

Introduction

Limitations of Powder EXAFS Spectroscopy
 Overlap of Atomic Shell Contributions
 Differentiation Between Dioctahedral and Trioctahedral
 Frameworks
Principles of P-EXAFS
Methodology
 Obtaining the Out-of-plane EXAFS Spectrum
 Texture of Self-supporting Films
Applications
 Dioctahedral Clay Structures
 Trioctahedral Clay Structures
 Phyllophanates
 CoOOH
Conclusions
Acknowledgments
References

New Opportunities for Microcrystalline and Powder Diffractometry at Synchrotron
Sources.....J. Parise

Introduction

Single Crystal Experiments
 Diffraction From Microcrystals
 Diffraction From Mineral Interfaces

- Powder Experiments
 - Instrument Geometry
 - New Detector Technologies
 - Resonant Scattering
 - Micro-Powder Diffraction
 - Time-Resolved Studies
- Conclusions and Future Prospects
- Acknowledgements
- References

Hard X-ray Synchrotron Microprobe Techniques and Applications.....S. Sutton and M. Rivers

- Introduction
- Hard X-ray Microprobe Techniques
 - Microanalysis Using the X-ray Fluorescence Technique
 - X-ray Absorption Fine Structure (XAFS) Spectroscopy Using Microbeams
 - Microtomography
- Applications
- New Opportunities Using X-ray Microprobes at Third Generation Synchrotron Sources
- Acknowledgements
- References

Synchrotron Infrared Microspectroscopy: Applications to Hydrous Minerals.....R. Lu, A. Goncharov, H. Mao, R Hemley

- Introduction
- Synchrotron versus Conventional IR Spectroscopy
- Identification of Mineral Phases in Mineral Phases in Multiphase Assemblages
- Quantitative Analysis of Hydrogen in Mantle Minerals
- Other Microspectroscopic Applications
- Future Prospects
- Acknowledgements
- References

Soft X-ray Optics and Spectromicroscopy: Potential for Soil Science Specimens.....C. Jacobsen, U. Neuhäusler

- Introduction
- X-ray Optical Interactions
- Elemental Analysis
 - Differential Edge Contrast in Transmission Edge Contrast using Fluorescence
- X-ray Optics
- Soft X-ray Microscopes
 - Spectromicroscopy
 - Cryo X-ray Microscopy

Potential for Clay and Mineral Studies
Acknowledgments
References

Reactions of Clay Particles in Aqueous Dispersions Studied by
X-ray Microscopy.....J. Niemeyer, J. Thieme

Introduction
The X-ray Microscope at BFSSY
X-ray Microscopy of Clay Suspensions
Summary
Acknowledgements
References

Real-time X-ray Diffraction of Montmorillonite Dehydration and
Rehydration at Pressure and Temperature in a
Diamond Anvil Cell.....W. Bassett, T. Wu

Introduction
Experimental Methods and Procedures
 Hydrothermal Diamond Anvil Cell (HDAC) Cornell High Energy
 Synchrotron Source (CHESS)
Results
 Ca-montmorillonite
 Mg-montmorillonite
Discussion
 Dehydration
 Pressure Dependence of Rehydration Hysteresis
 Effect of Interlayer Cations
Conclusions
Acknowledgments
References

Obtaining Access to Synchrotron-Based Techniques.....P. Bertsch, D. Schulze
